Wilger products are sold exclusively to original equipment manufacturers and authorized distributors, and are available to the end user through their retail dealerships.

Warranties - Wilger warrants that its products are free of defects in material and workmanship and perform to each product's specifications. The foregoing warranties are in lieu of all other warranties, written or expressed, including, but not limited to, those concerning suitability for a particular purpose. Claims under these warranties must be made promptly within one (1) year after receipt of goods by the buyer. Any warranty action by the buyer must be expressly pre-authorized by Wilger.

**Technical Assistance** - Wilger personnel are available to provide technical assistance in the choice and use of products furnished to the buyer and will do so free of charge. Wilger assumes no obligation or liability for any such advice, or any consequences occurring as a result of the application of such advice. The buyer is solely responsible for the selection of the appropriate product(s) and the appropriate application to the intended end use.

Limitation of Liabilities - Except for claims for bodily injury, Wilger's liability for any and all claims arising out of the purchase of the product shall not exceed the billed or billable value of the product. In no case will Wilger be liable for any consequential damages or loss of profit, even if Wilger has been advised of the possibility of such damages.

# **FEATURED & NEW SPRAYER PARTS FOR 2022**

### New COMBO-JET® Double-Down & Agrifac Adapters

New options for Double-Down Spraying!

Ideal for high-volume applications, tough to reach targets, and making the most out of the nozzles you have on hand.

### **COMBO-RATE®** Top Turrets

A top take-off turret is even more compact for larger PWM solenoids.

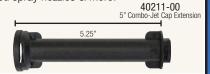

Available with **double-down spray** options, with backwards compatibility with all COMBO-RATE parts.

#### 2" & 5" Outlet Extensions

For extending nozzles down 2"/5" to avoid boom frame interference for angled spray nozzles & more.

#### **COMBO-RATE®** Swivel End Body

A new COMBO-RATE end body that provides a swivel joint that is **adjustable in 15° increments**, and locked into place for crop adapted spraying or fence-row nozzle spraying.

### **COMBO-RATE® Boom End Flush Valve**

A new 'last nozzle body' that is integrated directly into a flush valve for a super compact boom end nozzle & flush valve.

Perfect Recirc. Booms

Remove Deadspots for Boom Hygiene

**Compact Flush** 

& Recirc

### **Quick Flange Sprayer Boom Fittings**

The sprayer boom fittings for the next generation of sprayers

- Heavy-duty boom fittings that open up plumbing possibilities
- Ultimate configurations available for recirculating sprayer booms
- Common compatibility with common 1" flange fittings & more
- Even more fittings released into 2022

Boom End Conversion for Case TWS

**Easy Flange** 

Clean & Easy Recirculating Sprayer Boom Configurations

# New COMBO-RATE Pre-Assembled Manifolds for estate, yard & ATV sprayers

Need to replace your yard sprayer's control manifold?

Building your own yard or ATV sprayer?

COMBO-RATE manifolds are modular and can be expanded or modified with any COMBO-RATE fittings. From pressure regulators, pressure gauges, to anything else that might be required.

### **COMBO-JET® Nozzle Bodies for PWM**

Are you retrofitting your sprayer to PWM?

Cost-effective & compact nozzle

body for any tight sprayer boom.

40623-NM 1" Combo-Jet Triple Swive 40663-NM 1" Square Lug Triple Swivel Nozzle Body

# High-Flow COMBO-RATE II Bodies

21/32" inlet nozzle bodies can provide 45% more flow for flow rates upwards of 60 US GPA @ 15MPH with a single outlet.

Check the COMBO-RATE section.

# **NEW LIQUID FERTILIZER PARTS FOR 2022**

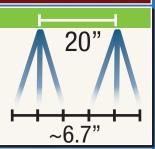

#### **NEW 3-Hole Fertilizer Streamer Nozzles**

Precision molded & color-coded liquid fertilizer streamer caps for consistent liquid fertilizer with less plant burn.

Available in molded sizes from 0.15-2.0 us gpm.

Includes metering orifice and deflector plate in a single part number for easy ordering.

### **New O-Ring Seal Fittings & Assemblies**

1" ORS Hose Barbs

20515-00

ORS Inline Strainer attaches to any ORS fitting 20576-00 Strainer Assembly 20576-02 50 Mesh Replacement Strainer

20644-00
4 Outlet EHM Manifold with new Straight 10 PSI Manual ON/OFF Check Valves

### New pre-assembled Flowmeter Manifolds

New electronic flowmeter manifolds with straight check valve allow for easy ordering and building of systems.

Simply replicate each section of the implement with manifolds of the same size, cap off the ends, add a hose feed, and away you go.

Available in manifolds of 1-4 Outlets.

## Wilger Electronic Row-By-Row Flow Monitoring System

20549-00

The serviceable flowmeter designed & built specifically for agricultural chemical & liquid applications

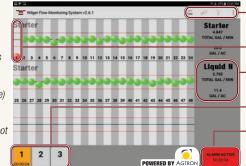

Simply enough, one of the highest compliments you can give farm equipment is "It works."

No fuss, no muss, it does the job it is supposed to do.

We are proud that for years, applicators have had exactly that (and more) to say about the EFM system.

The system worked after set up and typically ends up helping troubleshoot other equipment issues unrelated to the EFM, saving unexpected downtime & costs.

With a customize-able app and interface based on user input, it will quickly pay itself off in value for the farm.

—Simple menu and tools for setting up & customizing screens

Yellow & Red balls & lines show

Up to 3 different products can be monitored on one EFM system at the same time.

Two Simplified Views: Single Product View -

3 screens showing up to 72 rows

Multi-Product View:
10 sections up to 24 rows /section

\_\_Mutable Alarm button is able to alarm even if app is operating in the background

Fittings Swivel 360°

Serviceable

Flowmeter

for Ag.

Crystal Clear Flowmeter

Superior Chemical Resistance

Acid Resistant Parts

EFM systems are developed by OEM manufacturers using WILGER parts

TIP WIZARD

Tip Wizard has new features! ORS metering orifice calculator, Flow Indicator Ball Selector, and further improved Tip Wizard spray tip search.

Tip Wizard aims to lead the industry as the best spray tip calculator for broadcast applications.

WHERE TO BUY WILGER PRODUCT

To find a list of local dealers/retailers and distributors in your area, visit the WILGER.net 'WHERE TO BUY' page, to easily enter your address to find local Wilger product.

# The COMBO-JET. Spray Tip Advantage

Less plugging, as the path of flow always gets larger

40% longer strainer that snaps & seals into place

SR / MR / DR / UR 90% **75**% 90%+ **Drift Reduction Series** 

Cap color matched to flow rate

**Super long-lasting** stainless steel spray tip The most versatile spray tips for Pulse Width Modulation Systems (e.g. Capstan Pinpoint®/EVO®, Case AIM Command®, John Deere ExactApply®, IntelliSpray®, Raven Hawkeye®, & more)

Spray tip & cap are held together as one piece

Easy-to-read label

(MR110-06 = MR Series, 110° tip, 0.6 US GPM flow rate)

Best educational spray tip charts & tools provided to select the best spray tips

Combo-Jet tips use a modern pre-orifice & closed chamber design that produces significantly less drift, creating solid mass droplets, for maximum spray velocity and more meaningful spray.

Without needing consistent air induction for drift reduction Combo-Jet spray tips are the preferred tip for Pulse Width Modulation (PWM) spraying systems.

### WILGER.NET has the most useful spray tip selection help in the world.

# **Selecting the Right Spray Quality & Droplet Size**

# Difficus Effects

Generally speaking, smaller droplets deposit on the target more effectively than larger droplets, but larger droplets will drift less. So, when balancing drift control and efficacy, ensure to follow chemical labels and guidelines to designate the required spray quality and droplet size.

# **Where to find target spray quality or droplet size?**

Depending on the chemical, as well as the different methods and modes of applications, some chemical labels may have less/more information. In general, chemical labels will have a description of how it should be applied, in the form of an ASABE spray classification recommendation, or a minimum spray classification (e.g. Spray at least ASABE Coarse). Some chemical label will also stipulate which nozzles can be used.

Application Information: Water Volume: Minimum 22 L per acre.

Minimum volume requirement on chemical label

Reference max pressure for conventional nozzles like ER series. Try avoid conventional (non-drift reduction) spray tips.

Nozzles and Pressure: 30 to 40 psi (210 to 275 kPa) when using conventional flat fan nozzles.

Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE coarse spray**. Droplet spectrum recommendation for balance of drift & coverage.

# Example Spray Quality Chard by Type of Application

ASABE S-572.1 Classification Category	Color Code	Estimated VMD Range for Spray Quality*	Contact Insecticide & Fungicide	Systemic Insecticide & Fungicide	Contact Foliar Herbicide	Systemic Foliar Herbicide	Soil-Applied Herbicide	Incorporated Soil-Applied Herbicide	Fertilizer
Extremely Fine (XF)	Purple	Under 60							
Very Fine (VF)	Red	60-105							
Fine (F)	Orange	106-235							
Medium (M)	Yellow	236-340							
Coarse (C)	Blue	341-403							
Very Coarse (VC)	Green	404-502							
Extremely Coarse (XC)	White	503-665							
Ultra Coarse (UC)	Black	Over 665							

The above table provides general guidelines regarding droplet size and spray quality used in most spray applications.

It is always required that you carefully read and follow updated chemical manufacturers application label and instructions.

# What about Multi-Tip Spraying? When to consider Double-Down & Angled Spraying

Potential problems with HIGH FLOW applications (15GPA+) with a single spray nozzle: Spraying high volume out of a single tip can produce droplets that are 'too large" to be effective for coverage, which make for less effective spray application.

Using multiple spray tips at the same time can provide substantial gains in effective coverage into crops or applications that otherwise would be very difficult to cover; however, multi-tip spraying should not be used without reason.

A typical time to use **Multi-Angle** spraying:

For improved coverage on a vertical growing target (e.g. wheat) when you are needing to paint both sides of the plant with fungicide. (e.g. Fusarium Head Blight)

A typical time to use **Double-Down** spraying:

For high rate applications that rely on consistent coverage in a dense canopy. Use a nozzles to produce a meaningful mix of coarser and finer spray to hit different levels of the canopy.

Pairing already-owned nozzles to make a dual nozzle pair:

Much of the time, an operator already has 1-2 nozzles on the sprayer that could be stacked as a pair, so it is an effective way to use existing nozzles to improve spray application with very little cost.

<sup>\*</sup>NOTE: VMD range does not classify spray quality. Always ensure spray quality is followed first. VMD is a supplementary figure, and it is normal that nozzles with similar VMD can be classified into different spray qualities.

# First-timer's look at Tip Wizard

% of Volume < 500p For a relative factor of small

droplets in ideal conditions

USA 1 (877) 953-7695

#### Beginner's Guide to using Tip Wizard

- 1 Choose application units, spray system type, and search function (e.g. Search for tips)
- **Enter** application rate, spraying speed<sup>1</sup>, nozzle spacing, and spray tip angle<sup>2</sup>. Since PWM systems can modulate flow by changing the spray duration, enter the MAX typical spraying speed. <sup>2</sup>Spray tip angle required is based on nozzle spacing and boom height. Always maintain 100% overlap.
- 3 Enter target spray quality or target droplet size (microns).

<This is where Tip Wizard gets more useful>

Each chemical used in agricultural spraying has different spray quality requirements for best efficacy and also to maintain tolerable levels of driftable fines for spraying in ideal conditions. Using the droplet size (VMD) allows a more advanced way to filter through series of tips.

#### Where to find target spray quality or droplet size?

Depending on the chemical, as well as the different methods and modes of applications, some chemical labels may have less/more information. In general, chemical labels will have a description of how it should be applied, in the form of an ASABE spray classification recommendation, or a minimum spray classification (e.g. Spray at least ASABE Coarse

\_Minimum water requirement on chemical label by law

• Water Volume: Minimum 22 L per acre. Nozzles and Pressure: 30 to 40 psi (210 to 275 kPa) when using conventional flat fan nozzles. Try avoid non-drift reduction tips.

Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of ASABE coarse spray. Droplet spectrum recommendation for balance of drift & co Spray Categories as per ASABE S572.1 Classification

■ Extremely Fine ■ Very Fine ■ Fine ■ Medium ■ Coarse ■ Very Coarse □ Extremely Coarse ■ Ultra Coarse

For the example chemical label application information, we'd have a classification of COARSE droplet size to follow. Considering the mode of application as well as the action (e.g. systemic herbicide vs. contact herbicide), you can choose the spray quality that would suit your conditions as best as possible. REMEMBER: the larger the droplet size/VMD, the coarser the spray, resulting in less coverage

For advanced users, using a VMD droplet size can further filter into a spray quality to make it easier to compare one series

For an example, we might find we typically have windier conditions, so try filter our results to stay around 375µ-400µ for our targeted droplet size

Select the Best Spray Tip for your needs.

Based on the operating speed, pressure, spray quality, and while also gauging the last few columns (VMD, % drift, %

# Picking Spray Tips for Auto-Rate Controlled Sprayers

1 STEP 1: Size Your Tip Since the application rate must be consistent, selecting a tip sized to the required rate over the actual sprayer speed range is critical. It is recommended to use Tip Wizard, as it will adjust the chart specifically for any application rate, not just common pairs of rate & speed.

#### **FOCUS ON: SPEED & PRESSURE for a required APPLICATION RATE**

Speed and pressure dictate a spray tip's ability to match a rate, and we must ensure our typical travel speed follows a reasonable pressure range. Meet your minimum speed (e.g. turning) within the operational pressure range. Having pressure too low in slow spots can lead to spotty coverage. Once you have referenced your chart to find your applied rate to your speed, you will find a certain nozzle size will be most effective.

\*FOR PWM SPRAYERS (DUTY CYCLE): Since you have more control of your pressure, your sprayer will typically allow for a wider selection of tip size. Try to pick a size that allows a duty cycle of 60-80% at your typical sprayer speed, allowing sufficient speed up/down.

2 STEP 2: Filter to Your Spray Quality Each chemical will require a nozzle spray quality (for labels that do not, consult chemical representative or agronomist, or general guide based on mode of action), since you have selected your tip size (e.g. 110-04) you can now find the best option within the series available in that nozzle size. The ER/SR/MR/DR/UR series differ based on spray quality & drift reduction.

#### FOCUS ON: 'ASABE \$572' SPRAY CLASSIFICATION

Since the pressure is dictating the spray quality, you'll want to filter out any tip series that cannot apply the recommended spray quality.

\*FOR PWM SPRAYERS (Pressure Selection): Your spray quality can be changed with changing of sprayer pressure. This means instead of maintaining the required quality through a fixed operating pressure range, you can maintain a more flexible pressure range (provided duty cycle is OK).

3 STEP 3: Double Check It is worthwhile to review extra information provided for the spray tip, and re-evaluate if necessary. While the extra information in extrapolated from lab conditions without active ingredients, and cannot be considered actual, but it does lend to paint a picture of differences between series.

#### [ADVANCED] FOCUS ON: Spray % <141μ, Spray % <600μ, VMD (μ)

The extra columns reinforce the different spray qualities between different series, but also give the ability to make a rough spray plan for managing real life spraying conditions.

Spray % <141µ: % of total spray that can be considered driftable fines. In ideal conditions, it would be reasonable to assume this spray is NOT going where you want it to go. Due to evaporation before absorption, off-target spray or inversion, very small droplets will not likely hit target. Ideally have a spray tip that minimizes driftable fines, BUT ensure you maintain an acceptable level of coverage.

As speed, wind conditions & boom height increase, observed spray drift will increase substantially.

Spray % <600µ: % of total spray that can be considered small droplets. As % of these useful droplets lowers, coverage is reduced.

Consider it the 'other half' of the spray application, focusing on small droplets for coverage. Whereas you should maintain a low %<141µ, try to keep a %<600μ as high as possible, to maintain better coverage. As a very rough guideline with some usually chemical applications, aim for ~80+% <600μ for systemic applications; or ~90+% <600μ for contact applications; provided drift reduction levels are met and are satisfactory.

VMD (µ): The volumetric median diameter is the middle-point of spray distribution, and can be used to estimate between different series of the same size spray tips (tested on the same laboratory equipment). It is not for comparing between brands of tips. If you are familiar with using a VMD in tip searches, you can use it as an intensive filter to further focus in on tips that might work for your application. For example, if you are happy with spray application with the MR110-04 at 50PSI (346µ VMD), the spray quality might be comparable to an SR110-06 at 50 PSI (337µ VMD). Bear in mind, VMD is used for educational purposes only, and should not dictate application.

#### For more Guides, Videos & Reading on proper nozzle selection, visit www.wilger.net

We aim to have all sorts of ways to help make the best educated decision in picking and using spray tips, so if there is something you find would be helpful, don't hesitate to reach out and ask. Often, we cannot provide EVERYTHING there is to know in our guides, as it can be overwhelming, so if you are wanting to get more information from an expert, contact WILGER.

# Picking Spray Tips for Pulse Width Modulation (PWM) Sprayers

NOTE: PWM Spray systems differ in some respects (max flow capacity, pulse frequency (Hz), and other general variations in operation. This guide is a general guide that applies to most PWM spray systems, but for clarification would be based on a 10Hz solenoid, with a relative max flow capacity of 1.5 us gpm (this determines the relative pressure drop). Wilger does not own, produce, or have any ownership of PWM spray systems. All rights reserved by their owners.

1 STEP 1: Size Your Tip Since the application rate must be consistent, selecting a tip sized to the required rate over the actual sprayer speed range is critical. It is recommended to use Tip Wizard, as it will adjust the chart specifically for any application rate.

Since PWM sprayers have control of sprayer pressure, a PWM sprayer will typically allow for a wider selection of tip sizes.

#### FOCUS ON: SPEED, PRESSURE & DUTY CYCLE (DC%) for a required APPLICATION RATE

Speed, pressure and respective duty cycle dictate a spray tip's ability to match a rate, and we must ensure our typical travel speed follows a reasonable pressure range. Having duty cycles <50% can degrade spray quality and consistency of spray swath, so it is always recommended to be above that. Try to pick a size that allows a duty cycle of 60-80% at your typical sprayer speed, allowing sufficient speed up/down. If a nozzle is approaching 90-100% at your maximum sprayer speed at your highest pressures, this can be a good indication that a nozzle is sufficiently sized.

Before you look at any coverage/spray quality characteristics of a nozzle, you should have solidified which nozzle SIZE will work best first.

STEP 2: Filter to Your Spray Quality Each chemical will require a nozzle spray quality (for labels that do not, consult chemical representative or agronomist, or general guide based on mode of action), since you have selected your tip size (e.g. 110-04) you can now find the best option within the series available in that nozzle size. The ER/SR/MR/DR/UR series differ based on spray quality & drift reduction.

#### FOCUS ON: 'ASABE S572' SPRAY CLASSIFICATION

Since the pressure is dictating the spray quality, you'll want to filter out any tip series that cannot apply the recommended spray quality. Since PWM gives full control of sprayer pressure, this will usually filter the results to 1-2 nozzles within a size or series.

STEP 3: Pick your most flexible spray nozzle It is worthwhile to review extra information provided for the spray tip, and re-evaluate if necessary. While the extra information in extrapolated from lab conditions without active ingredients, and cannot be considered actual, but it does lend to paint a picture of differences between series.

The goal is to select a nozzle that can be applied at relatively moderate pressures (e.g. 50-60PSI) when spray conditions are ideal, giving a means to reduce pressure to 30-40PSI to have a 'drift reduction mode' that can be called upon when less ideal conditions arrive.

#### [ADVANCED] FOCUS ON: Spray % <141μ, Spray % <600μ, VMD (μ)

The extra columns reinforce the different spray qualities between different series, but also give the ability to make a rough spray plan for managing real life spraying conditions.

Spray % <141µ: % of total spray that can be considered driftable fines. In ideal conditions, it would be reasonable to assume this spray is NOT going where you want it to go. Due to evaporation before absorption, off-target spray or inversion, very small droplets will not likely hit target. Ideally have a spray tip that minimizes driftable fines, BUT ensure you maintain an acceptable level of coverage.

As speed, wind conditions & boom height increase, observed spray drift will increase substantially. With wind speeds of 12mph+, it can be expect to have driftable fine spray double. Windy conditions, higher drift sensitivity, and other environmental reasons are serious considerations for what might be an acceptable level of driftable fines.

By general chemical mode of action, you might have a reference point for % driftable fines, which might be generalized as:

Systemic Herbicides: Try maintain driftable fines <10%. (For very sensitive applications and herbicides, the requirement might go down to even 1.5-5%) Contact Herbicides & Fungicides: Try maintain driftable fines <15%. This allows for a consistent and high level of coverage without losing a great deal to driftable fines. It is often part of a good balance between driftable fines and coverage.

Spray % <600µ: % of total spray that can be considered small droplets. As % of these useful droplets lowers, coverage is reduced. Consider it the 'other half' of the spray application, focusing on small droplets for coverage. Whereas you should maintain a low %<141µ, try to keep a %<600μ as high as possible, to maintain better coverage. As a very rough guideline with some usually chemical applications, aim for ~80+% <600μ for systemic applications; or ~90+% <600µ for contact applications; provided drift reduction levels are met and are satisfactory.

VMD (µ): The volumetric median diameter is the middle-point of spray distribution, and can be used to estimate between different series of the same size spray tips (tested on the same laboratory equipment). It is not for comparing between brands of tips. If you are familiar with using a VMD in tip searches, you can use it as an intensive filter to further focus in on tips that might work for your application. For example, if you are happy with spray application with the MR110-04 at 50PSI (346µ VMD), the spray quality might be comparable to an SR110-06 at 50 PSI (337µ VMD). Bear in mind, VMD is used for educational purposes only, and should not dictate application.

#### Quick-Start Example: 10 US GPA @ 14 MPH, on 20" spacing, with a PWM Spray System, applying SYSTEMIC HERBICIDE (glyphosate)

#### STEP 1: SIZE THE TIP: Focus on Pressure/Speed Range/Duty Cycle (Try maintain 60-80% duty cycle through full speed/pressure range)

For the best option for a tip size, it'd likely be the **110-06 size**. (110-05 falls short of nozzle size, and 110-08 starts getting too large)

It would apply 10 US GPA, 14MPH anywhere between 30-60PSI PSI, allowing more than enough room into turn situations if turn compensation is available.

#### **STEP 2: QUALIFY THE SPRAY**

Since the chemical label for glyphosate requires a 'even coverage of ASABE COARSE droplets', we will notice the ER110-06 is too fine, the SR fits just right, and the MR/DR are a fair bit coarser than required. We could also use a VMD of 400µ to filter out more.

Note: The MR & DR series are coarser than required, but might be suitable for applicators who have to apply into more drift-sensitive areas.

For this example, we will single out the SR110-06 as our best tip series.

#### STEP 3: DOUBLE CHECK SR110-06 for max flexibility between 'IDEAL SPRAYING MODE' & 'DRIFT REDUCTION MODE'

**@50PSI: DUTY CYCLE: 75%** ✓ Excellent **@35PSI: DUTY CYCLE: 90%** ✓ OK @50PSI: COARSE Spray Class **@50PSI** % < 141μ: ~9% ✓ Good

Ideal Condition Spraying @ 14MPH: Drift Sensitive Spraying @ 14MPH: @35PSI: VERY COARSE Spray Class @35PSI % < 141µ: ~6% ✓ Excellent 

Further considerations: Given the high level of coverage at higher pressures (50PSI+), this same nozzle could be used for contact herbicides and fungicides to cover more applications.

# **Picking Nozzles for Dual-tip Spraying**

Picking two spray tips isn't much different than a single tip. Since the sprayer has some means of adjust the flow to match a flow rate, simply pick a nozzle size that would supply the full rate, and then divide it into parts that would provide the same flow rate.

**For example:** If a 110-10 nozzle size is required for an application, suitable pairs would be like a '110-06 + 110-04' or '110-05 + 110-05', as the cumulative size would be able to apply the same rate as a single 110-10. For consistency, limit the size difference to two nozzle sizes to ensure consistent back pressure between both nozzles. (e.g. 110-08 +110-02 would not be ideal as the -08 might steal flow from the -02)

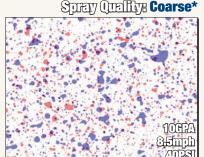

**1** STEP 1: Size Your Tip Since the application rate must be consistent, selecting a tip sized to the required rate over the actual sprayer speed range is critical. It is recommended to use Tip Wizard, as it will adjust the chart specifically for any application rate, not just common pairs of rate & speed.

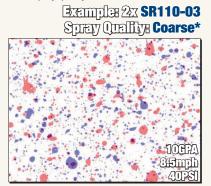

FOCUS ON: SPEED & PRESSURE for a required APPLICATION RATE

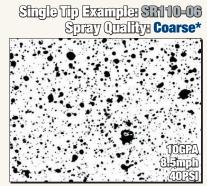

\*FOR PWM SPRAYERS (DUTY CYCLE): Since you have more control of your pressure, your sprayer will typically allow for a wider selection of tip size.

Try to pick a size that allows a duty cycle of 60-80% at your typical sprayer speed, allowing sufficient speed up/down.

STEP 2: Filter to Your Spray Quality Each chemical will require a nozzle spray quality (for labels that do not, consult chemical representative or agronomist, or general guide based on mode of action), since you have selected your tip size (e.g. 110-04) you can now find the best option within the series available in that nozzle size. The ER/SR/MR/DR/UR series differ based on spray quality & drift reduction.

\*IMPORTANT: FOR PWM SPRAYERS (Pressure-drop through solenoid): Depending on the solenoid used, for larger nozzle sizes (or cumulative nozzle sizes for double-down nozzles) there will be greater pressure drop. So, when considering spray quality for the smaller nozzles in a pair, verify the pressure drop for the cumulative size as it will differ from the nozzles individually. With the pressure drop factor, cross-reference the spray quality of the smaller nozzles in the pair for their more realistic spray quality (after pressure drop).

3 STEP 3: Double Check Just like the 'Quick-start guide to picking spray tips', refer to the extra information to qualify nozzles to ensure they will suit your application. Since the pair of nozzles are spraying a fraction of the total weight, there is some synergy between having one as a finer nozzle and the other coarser to produce a more meaningful mix of spray droplet sizes to get where they need to go.

#### [ADVANCED] FOCUS ON: Spray % <141μ, Spray % <600μ, VMD (μ)

The extra columns reinforce the different spray qualities between different series, but also give the ability to make a rough spray plan for managing real life spraying conditions.

Spray % <141µ: % of total spray that can be considered driftable fines. If one nozzle is producing more driftable fines than the other, but when averaging based on the flow, you'd want to ensure you are still at a tolerable driftable fines % given the application.

As speed, wind conditions & boom height increase, observed spray drift will increase substantially. This is especially the case with forward/backward facing

Spray % <600µ: % of total spray that can be considered small droplets. As % of these useful droplets lowers, coverage is reduced.

Since you are splitting a single 'large' nozzle into two smaller nozzles, you should take advantage of getting a much higher %<600µ than possible with a single nozzle.

VMD (µ): As VMD is the middle point in the distribution of spray, and a pair of nozzles will have a blended VMD when both are considered, simply qualify a tip based on acceptable spray quality first, and take note of the two nozzles and

#### EXAMPLE: 20 US GPA Glufosinate (Contact Herbicide), on 20" spacing, traveling 12 mph, using a PWM spray system

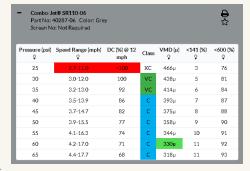

STEP 1: Using Tip Wizard (or nozzle charts), a 110-125 nozzle size would suffice for travel speed and pressure range. The ER110-125 is shown as an example. With this 110-125 nozzle size, we know a nozzle pair adding to a ~110-125 would be suitable for the application rate. (e.g 110-06 + 110-06) With this, split the nozzle size into portions and search for a '10 GPA' nozzle and '10GPA' nozzle for example, based on a fraction of total flow.

NOTE: There is extra pressure drop through a solenoid, so keep that in mind when selecting nozzles as the spray quality will differ from nozzles operating by themselves.

STEP 2: By chemical label, Glufosinate is to be applied as a ASABE medium spray quality or coarser. Qualify spray nozzles suitable for chemical label requirement.

STEP 3: Qualify nozzle pair based on spray quality, and pick based on most suitable % driftable fines (ideally <15%) and % coverage (ideally >90%)

Example Result:
Double-Down SR110-06 would
provide upwards of 10%+ more
volume made of small droplets,
without increasing driftable fines.

The spray quality is within the 'coarse' spray quality, just outside MEDIUM spray quality. An ER series could be substituted to provide a mix of even finer spray into the dual nozzle setup.

Total flow would be the same as a 110-12, which would be nominally smaller than a 110-125.

# **COMBO-JET ER Series Spray Tips**

The ER series spray tip is a conventional flat fan nozzle, emphasizing consistent spray pattern with relatively fine spray. All ER nozzles are manufactured with a stainless steel tip.

Longer Lasting Stainless Tips

Less Plugged **Nozzles** 

Perfect for PWM **Sprayers** 

Consistent Pattern at Lower PSI

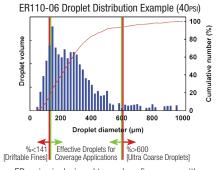

Solid Mass **Spray Droplets** 

Acid Resistant Nozzles

FINE COVERAGE REDUCTION

ER series is designed to produce finer spray with a consistent pattern.

# **COMBO-JET UR Series\* Spray Tips**

\*U.S. Patent No. 10,603,681

The UR series spray tip is a dual-chamber, pre-orifice drift reduction nozzle, emphasizing the coarsest stage of drift reduction. The UR series is heavily suited to ultra-low driftable fines, emphasizing drift reduction over coverage.

**Approved** for Dicamba Mixes

**Spray** Drift

**Ultra Low** 

Longer

Lasting

**Tips**

#### **COMBO-JET® UR Series Specifications**

Approved for PWM Spray Systems Compatible with all PWM Spray systems/Hz.

Operating Pressure 35-100PSI

Flat Fan Nozzle Type Dual Closed-Chamber, Pre-Orifice Drift Reduction

Nozzle Materials

Spray Tip: Stainless Steel Repl.O-ring: FKM, 13mm x 3mm #40260-00 (viton avail) Cap: Glass-reinforced Polypropylene

#### **ASABE Spray Classification**

(ASABE S572.1 Standard)
Spray quality is categorized based on Dv0.1 and VMD droplet sizes.
Objective 3rd party testing data, from spray spectrum recording equipment (without wind tunnel use), has been used to classify spray quality for this chart. Chart shown includes spray quality at tested data points as well as extrapolated data points.

Fine (F) Medium (M) Coarse (C)

Very Coarse (VC) Extremely Coarse (XC) Ultra Coarse (UC)

UR Nozzles verified on Malvern.

# **COMBO-JET 80° Spray Tips - Standard Sprayer Systems**

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

NOTE: 'SR, MR, DR, UR spray tips include pre-orifice(s). Pre-orifices are not interchangeable between different spray tips of different series. 'Shown application information is based on water @ 80°F in a controlled environment and should not be considered actual. Information is provided for comparison to other Combo-Jet® spray tips, for educational purposes only. Repeat testing results can vary.

# **COMBO-JET 80° Spray Tips - Standard Sprayer Systems**

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

ASABE Spray Classification (ASABE 5572.1 Standard)
Spray quality is categorized based on Dv0.1 and VMD droplet sizes.

Objective testing data (by 3rd party), from spray spectrum recording equipment (without wind tunnel use), has been used to classify spray quality for this chart. Extra data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided as an educational resource only.

Tips sized up to 110-06 verified on Phase Doppler Particle Analyzer (PDPA); tips sized over 110-06 verified on Malwern.

VMD (Volume Median Diameter) The median droplet (in  $\mu$ ) for a sprayed volume. Half of the volume is made of droplets smaller, with

% <141μ (% Driftable Fines) Percentage of volume which is likely to drift. As wind & boom height increase, observed spray drift will increase substantially.

% <600µ (% of Small Droplets) % of volume which is made up of 'small' droplets, useful for coverage. As % of useful droplets lowers, overall coverage is reduced.

Nozzle	on Phase Dopp	Boom					on Malverr			se (UC		_			D (Drop		e in μ);			rift %);		(S		roplets

NOTE: 'SR, MR, DR, UR spray tips include pre-orifice(s). Pre-orifices are not interchangeable between different spray tips of different series. "Shown application information is based on water @ 80°F in a controlled environment and should not be considered actual. Information is provided for comparison to other Combo-Jet® spray tips, for educational purposes only. Repeat testing results can vary.

# **COMBO-JET 110° Spray Tips - Standard Sprayer Systems**

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

ASABE Spray Classification (ASABE S572.1 Standard)

Spray quality is categorized based on Dv0.1 and VMD droplet sizes.

Objective testing data (by 3rd party), from spray spectrum recording equipment (without wind tunner use), has been used to classify spray quality for this chart. Extra data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided as an educational resource only.

Tips sized up to 110-06 verified on Phase Doppler Particle Analyzer (PDPA); tips sized over 110-06 verified on Malvern.

VMD (Volume Median Diameter)
The median droplet (in µ) for a sprayed volume. Half of the volume is made of droplets smaller, with half made up of droplets larger.

% <141μ (% Driftable Fines) Percentage of volume which is likely to drift. As wind & boom height increase, observed spray drift will increase substantially. % <600μ (% of Small Droplets)
% of volume which is made up of
'small' droplets, useful for coverage.
As % of useful droplets lowers,
overall coverage is reduced.

NOTE: 'SR, MR, DR, UR spray tips include pre-orifice(s). Pre-orifices are not interchangeable between different spray tips of different series. 'Shown application information is based on water @ 80°F in a controlled environment and should not be considered actual. Information is provided for comparison to other Combo-Jet® spray tips, for educational purposes only. Repeat testing results can vary.

# **COMBO-JET 110° Spray Tips - Standard Sprayer Systems**

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

ASABE Spray Classification (ASABE S572.1 Standard)

Spray quality is categorized based on Dv0.1 and VMD droplet sizes.

Objective testing date by 3rd party, from spray spectrum recording equipment (without wind tunner use), has been used to classify spray quality for this chart. Extra data (e.g. VMD, etc.) can vary very Coarse (VC)

hetween testing equipment and method, and is provided as an educational resource only.

Extremely Coarse (VC)

Ultra Coarse (UC)

VMD (Volume Median Diameter) The median droplet (in u) for a sprayed volume. Half of the volume is made of droplets smaller, with half made up of droplets larger.

% <141μ (% Driftable Fines) Percentage of volume which is likely to drift. As wind & boom height increase, observed spray drift will increase substantially.

% <600μ (% of Small Droplets) % of volume which is made up of 'small' droplets, useful for coverage As % of useful droplets lowers, overall coverage is reduced.

Tips sized up to 1	10-06 verified o											JC)	<u> </u>	nalf ma	de up of	droplets	larger.	_  _	drift wil	increas	e substa	antially.	╝┖	overa	l coveraç	ge is reduced.

# **COMBO-JET 110° Spray Tips - Standard Sprayer Systems**

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

# **COMBO-JET 80° Spray Tips - PWM Spray Systems**

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

ASABE Spray Classification (ASABE 5572.1 Standard)
Spray quality is categorized based on DV0.1 and VMD droplet sizes.

Objective testing data (by 3rd party), from spray spectrum recording equipment (without wind tunnel use), has been used to classify spray quality for this chart. Extra data (e.g. VMD, etc.) can vary between testing equipment and method, and is provided as an educational resource only. Fine (F) Medium (M)

Coarse (C)
Very Coarse (VC)
Extremely Coarse (XC)

VMD (Volume Median Diameter) The median droplet (in  $\mu$ ) for a sprayed volume. Half of the volume is made of droplets smaller, with

% <141µ (% Driftable Fines) Percentage of volume which is likely to drift. As wind & boom height increase, observed spray

% <600µ (% of Small Droplets) % of volume which is made up of small' droplets, useful for coverage. As % of useful droplets lowers,

				lyzer (PDPA); tips sized			tra Coarse (U			half made up of	droplet	ts larger.		drift will	increa	se subst	antially.		overa	all covera	ige is re	educ

Comprehensive rate & speed charts for any nozzle spacing/speed/rate is available on Tip Wizard. Try it today!

Disclaimer: These charts are published for comparative purposes to demonstrate the differences in the series of Combo-Jet® spray tips. Data used to populate this chart is extrapolated from third party testing data from a controlled conditions test with water as the testing solution. Actual spray applications with active chemical ingredients may change the spray dynamics and spray tip performance specifications. Wilger is not liable for any misuse or misrepresentation of this information, leading to (but not limited to) incorrect spray application, crop damage, or any other harm. (Not limited to human, livestock or environmental). Always verify these charts with the most recent charts found on the www.wilger.net, and ALWAYS follow chemical label nozzle requirements.

ASABE Spray Classification (ASABE S5/2.1 Standard)

Spray quality is categorized based on Dv.0.1 and VMD droplet sizes.

Objective testing data (by 3rd party), from paray spectrum recording equipment (without wind tunner use), has been used to classify spray quality for this chart. Extra data (e.g. VMD, etc.), can vary between testing equipment and method, and is provided as an educational resource only.

Extremely Coarse (XC)

Ultra Coarse (UC)

Ultra Coarse (UC) ASABE Spray Classification (ASABE S572.1 Standard)

Fine (F)

VMD (Volume Median Diameter) sprayed volume. Half of the volume is made of droplets smaller, with half made up of droplets larger.

% <141µ (% Driftable Fines) Percentage of volume which is likely to drift. As wind & boom height increase, observed spray drift will increase substantially

% <600µ (% of Small Droplets) % of volume which is made up of small' droplets, useful for coverage As % of useful droplets lowers, overall coverage is reduced

# COMBO-JET® Narrow-Angle Nozzles for Specialty/Spot Spraying

A full selection of narrow angle spray nozzles for use in specialty applications that require a narrow, but thick pattern. These nozzles are fully compatible with PWM spray systems, and other optical spray systems. Contact factory for availability.

#### What is optical spot spraying?

Optical spraying systems, or spot spraying based on optical feedback is used for a variety of purposes and with different mode of actions.

#### **Spray on Green**

Optics identify 'green' targets in field, and sprays them.

Examples include:

- Spraying herbicides to clear out established weeds before planting.
- Spraying Fungicide in-crop to any plants in field, skipping bare ground.
- Use more expensive modes of actions to manage resistant weeds.
- Foliar fertilizer applications on plant only

#### Green on Green

Optics & computer differentiate plants in field and spray target plants only.

Examples include:

- Spraying weeds ONLY with herbicide, avoiding planted crop.
- Spraying crop with fungicide, ignoring weeds or non-target plants.

While the potential benefits of **Green on Green** provide a great deal of flexibility & means to use cost-prohibitive herbicide regimens, the means to differentiate plants at application time and development of the computing power and learning mechanisms are continually under development.

### COMBO-JET® ER & DX Series of 20°, 40° & 60° Narrow-Angle Spray Nozzles for Spot Spraying

A new series of DX drift reduction, narrow angle nozzles.

Nozzl Angle	& Rate	Boom Pressure	Application Rate in US Gallons / Acre on 20" Nozzle Spacing			
Sizes	USGPM	PSI	@ Sprayer Speed - Miles / Hour	20° Nozzles	40° Nozzles	60° Nozzles

For smaller sizes of nozzles in narrow-angle varieties, please contact Wilger. As spot-spraying systems continue to develop, Wilger expects to have a variety of nozzles developed in turn to support the new improvements to maximize effectiveness.

For larger sizes of nozzles in narrow-angle varieties, please contact Wilger. As spot-spraying systems continue to develop, Wilger expects to have a variety of nozzles developed in turn to support the new improvements to maximize effectiveness.

#### What is the **DX series** of spray tip?

Effectively through development of the narrow angle nozzles, there seems to be a relative sweet spot for consistent coverage and maintaining a reasonable level of driftable fines.

Since optical/spot sprayers are commonly sharing a maximum speed and narrow spacing, it is easier to consolidate what Wilger finds as a good middle ground to offer a single drift reduction nozzle.

That being said, if you have a significant need for a coarser option than the DX nozzle, by all means contact Wilger and we would likely have something that might be made available to you.

#### Other uses for narrow-angle nozzles

Narrow angle spray nozzles are also key in improving some non-standard broadcast field spraying.

Narrower angle nozzles can be used in applications that specifically target certain parts of the plant where application to the rest of the plant is waste.

There are also cropping applications that might be continually cropping into **high stubble**, where traditional wide angle nozzles will result in significant spray catch and run-off in the stubble.

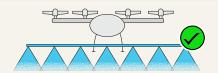

It is important to recognize narrow angle nozzles are not to be used strictly as replacements for nozzles that are intended for your sprayer (e.g. 80° or 110°). They are only an option to further isolate and target a spray target to achieve better spray efficiency and minimize chemical waste.

#### Are they still PWM-compatible?

Absolutel

The narrow angles use the same drift reduction design that is completely compatible with optical spray systems that are typically driven by PVVM solenoids. The consistent thickness of the narrow angles make the key choices for optical spot sprayers for both compatibility and performance.

#### Are DX nozzles used on Drone Sprayers?

UAV sprayer applicators are able to use DX nozzles for targeted spray applications, but often due to boom constraints or UAV sprayer outfitting, wider angle nozzles like the MR110° nozzles might be used. In specialty circumstances that require a narrow full pattern spray can take advantage of the DX series of narrow-angle nozzles.

DX nozzles can be used on UAV sprayers, but they would likely be specialty applications or on sprayers that require very narrow spacing.

Contact WILGER offices for smaller sizes of DX nozzles for Drone applications

#### **LERAP Drift Reduction Star Rating for COMBO-JET Spray Nozzles [For UK applicators]**

Local Environmental Risk Assessments for Pesticides (LERAP) certification is completed in the UK to provide applications a means to qualify a local drift reduction assessment based on the nozzles used for an application.

otaly tarrow for farther ELITA THOLLIO tooling for more noticion			
LERAP RATING	Nozzle Pressure Ra		
	DR110-03	1.0 - 1.5 BAR	
****	DR110-05	1.0 - 1.5 BAR

For the updated list on COMBO-JET nozzles, visit <u>www.wilger.net/LERAP</u>

More information on LERAP certification, process, and the most up to date listing of approved nozzles and their ratings, is available from the Health and Safety Executive (HSE), also available online @ https://secure.pesticides.gov.uk/SprayEquipment

# **COMBO-JET**<sub>®</sub> Cap Adapters

Order #####-V0 for viton o-ring assemblies

Wilger manufacturers a variety of adapters to adapt Wilger nozzles to other brands of nozzle bodies (e.g. Teejet, Hypro, Arag, etc) and vice versa. All adapters self-align cap to common nozzle offset.

### **Square Lug to COMBO-JET**

40204-00 Converts Square Lug (e.g. Teejet/Hypro) Outlet to COMBO-JET -TWISTLOCK-

### **COMBO-JET** to Square Lug

40203-00 Converts COMBO-JET Outlet to Square Lug (e.g. Teejet/Hypro) -Quarter Turn-

#### HARDI to COMBO-JET

40202-00
Converts HARDI Outlet
to COMBO-JET
-Semi-permanent
snap on adapter-

#### **AGRIFAC to COMBO-JET**

40205-00 Converts Agrifac Outlet to COMBO-JET -Easy nozzle sleevesnaps into any Combo-Jet nozzle

### **Square Lug to DOUBLE-DOWN**

40206-00
Converts Square Lug Outlet
(e.g. Teejet/Hypro)
to COMBO-JET
Double-Down Outlets
-TWISTLOCK-

# JACTO to COMBO-JET

40207-00 Converts Jacto Outlet to *COMBO-JET* -Quarter Turn-

# Radialock Slotted Caps (Compatible with COMBO-JET outlets)

Wilger manufacturers a variety of caps for accepting flanged spray tips onto any Combo-Jet or Combo-Rate nozzle outlets. These caps require a spray tip gasket to seal, which is sold separately.

1/2" round

#### Gasket for Slotted Caps

EPDM Rubber Gasket for Flanged Tips & Radialock slotted caps Order 40160-V0 for viton gasket 3/8" Slot

3/8"

For 3/8"

Teejet/Hypro

40269-05 spray tips

40269-05 spray tips 40271-05 spray tips

Available in colors: Grey (-09), Orange (-08), Brown (-07), Blue (-06), Black (-05), Yellow (-04), Green (-03), Will (-02), Red (-01)

### 1/2" Round Slot 7/16" Wide Slot

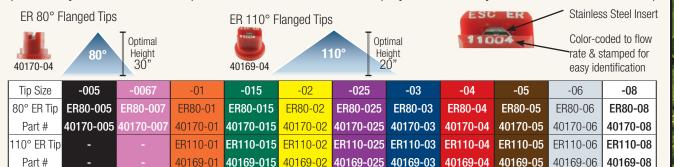

Available in colors\*: **Black (-05)**, **Yellow (-04)**, **Green (-03)**, **White (+02)**, **Red (-01)** \*Check factory availability of non-black colors.

# Conventional Flat Fan Flanged Spray Tips (3/8" slot)

Wilger manufacturers a variety of sizes of flanged stainless steel spray tips inserted permanently into a flanged spray tip assembly. These would correspond to Combo-Jet ER series of spray nozzle, as they are a conventional flat fan tip.

For flow rate charts, spray quality, and more information on flanged spray tips, reference the 80° and 110° spray nozzle charts

# **COMBO-JET**<sub>®</sub> Caps, Adapters & Strainers

Wilger manufacturers a variety of caps that are used for metering flow rates (through hose barb, push-in tube, or streamer caps) or used as accessories for other spraying or plumbing functions.

### **Plug Caps**

Caps unused Combo-Jet nozzle body outlets

Plug Cap		
Assembled Plug Cap Only		
40272-B5	40272-05	

# **Double Nozzle Spraying Adapters**

Be sure to read the 'Tip Selection Guide for Double Nozzle Spraying

#### Y-Adapter or 'Double-Down' mode?

To split up a high volume, coarse spray nozzle into two more meaningful spray qualities Y-adapter is excellent for vertical growing targets, double-down is better into thick canopies

#### PWM-Ready Double Nozzle Spraying

Just add the two nozzle sizes together for your PWM nozzle flow?

For example: MR110-04 + \$2110-06 = 110-10 \*PWM solenoid pressure drop would be based on -10 size

### **Threaded Outlet Adapters**

Threaded adapter caps can be used for any application that would require a threaded fitting.

Threaded Outlet Caps			
Thread Size FKM O-ring Assy Cap Only			
1/8" NPT-F	40277-B5	40277-05	
1/4" NPT-F	40273-B5	40273-05	
45° 1/4" NPT-F	40274-B5	40274-05	

### Y Splitter [60° Forward/Back]

Spray forward and backward for high volume and fungicide spray applications.

40440-00		
Y Splitter Ca	p (60° forward, 60	0° backward)
Cap ONLY	w/ FKM O-ring	w/ viton O-ring

100 mesh	-	#40251-00	Green						
50 mesh	40249-00	#40250-00	Blue						
25 mesh	40248-00	-	Yellow						
16 mesh	40247-00	-	Gray						

### '-B5' Assembly Breakdown - For non-metering apps

For applications that do not required liquid metering orifices (e.g. plumbing manifolds), the -B5 is an assembly that includes an o-ring (#40260-00), seal adapter (#40261-00 in lieu of orifice), and cap.

## **Hose Drop & Extension Caps**

Hose Drop Caps are used to feed or spray down below a canopy to minimize crop contact.

Other styles of Hose Drop Assemblies using threaded inlets are also available. Find them in the DRY BOOMS section of the catalog.

22021-00

# Ordering [Drilled] Streamer Caps

For drilled streamer cap assembly, order:

- 1. Metering Orifice (40285-## series)\*
- 2. Streamer cap (2 or 3 hole, sized to flow range)
- 3. 0-ring seal (40260-00 or 40260-V0)
- 4. [Optional] Slotted Strainer

Deflector Plate 3-hole fertilizer streamer nozzle improves stream consistency at higher pressures for improved application.

Next page for info.

# **COMBO-JET** Metering Orifices & Fertilizer Streamer Caps

# **COMBO-JET** Fertilizer Streamer Caps

Color-coded 3-hole streamer nozzles designed for streaming liquid fertilizer on consistent spacing to minimize leaf burn.

# **COMBO-JET** Nozzle Bodies

**Hinged Clamp for easy** installation

**Compact body sits** directly under the boom. Perfect for tight boom frames & heavy **PWM** solenoids

**Nozzle Bodies can** swap right/left orientation to avoid sprayer boom frame

KWIKSTOP™ raised inlet option available to reduce nozzle run-on

Debris-cleaning 3/8" inlet slots for less residue buildup

Bodies can be equipped with any combination of control modules, including AIR-OFF, PWM solenoid, Manual ON/OFF or spring-based diaphragm check valves

**Nozzle Bodies available in Combo-Jet or Square Lug styles** (Teejet/Hypro/etc) with 1, 2 or 3 nozzle outlets

### Single Outlet COMBO-JET® Nozzle Bodies

Robust and cost effective nozzle bodies for sprayers and used on wet boom liquid fertilizer kits.

Boom Pipe	Outlets	Style	Part#
3/4" (0.84" OD)	1 CJ	Check Valve	40611-00
1"		Check Valve	40621-00
(1.315" OD)	1 CJ	Manual On/Off	40621-MS
(1.313 00)		No Module	40621-NM

40611-P15 Single Outlet w/ 15PSI check valve (red) and hose barb cap

Commonly used in liquid fertilizer metering manifolds mounted on plumbed pipe

#### KWIKSTOP™ stops Run-on

KWIKSTOP™passively purges air trapped in the sprayer boom.

Nozzles are fed from the top of the pipe

Less air means Less Nozzle Run-on & Drips

#### Dual Outlet COMBO-JET® Swivel Bodies

Robust and cost effective nozzle bodies for sprayers to switch up to two nozzles by simply rotating the outlet. Safer and easier than handling contaminated nozzles.

Boom Pipe	Outlets	Style	Part#
3/4" (0.84" OD)	2 CJ	Check Valve	40612-00
1"		Check Valve	40622-00
(1.315" OD)	2 CJ	Manual On/Off	40622-MS
(1.313 OD)		No Module	40622-NM

Commonly used to cos effectively retrofit a sprayer to a PWM spray

#### High/Low PSI Check Valves

Replace assembly part # ending '-00' to order 4PSI or 15PSI check valves

4 PSI [BLUE]

-00 [Standard]

15 PSI -P15 [RED]

### Triple Outlet COMBO-JET® Swivel Bodies

Robust and cost effective nozzle bodies for sprayers to switch up to three nozzles by simply rotating the outlet. Safer and easier than handling contaminated nozzles.

Boom Pipe	Outlets	Style	Part#
3/4" (0.84" OD)	2 CJ	Check Valve	40612-00
411		Check Valve	40622-00
(1.315" OD)	2 CJ	Manual On/Off	40622-MS
(1.315 00)		No Module	40622-NM

#### **Smooth Clamp Bodies**

Swivel bodies have been switched to a standard bolt-mount hinge clamp.

Contact Wilger for a cross-reference chart for the smooth clamp part numbers and their bolt-mount replacement.

#### **Nozzle Body Specifications**

Operating Pressure	10*-125PSI
Single Outlet Flow Rate	2.1 us gpm @ 5PSI pressure drop 3.1 us gpm @ 10PSI pressure drop
Dual Swivel Flow Rate	1.7 us gpm @ 5PSI pressure drop 2.7 us gpm @ 10PSI pressure drop
Triple Swivel Flow Rate	1.6 us gpm @ 5PSI pressure drop 2.6 us gpm @ 10PSI pressure drop
O-ring Seals	FKM (viton avail.)
Materials	SS (screws) Polypropylene (body) Celcon (lower swivel)

#### 1" KWIKSTOP™ Nozzle Bodies

Nozzle bodies with raised inlets to passively purge air trapped at the top of a sprayer boom pipe, reducing nozzle run-on & improving boom shut-off response times.

Boom Pipe	Outlets	Style	Part#
1"	1 CJ	Check Valve	40631-00
(1.315" OD)	2 CJ	Check Valve	40632-00
(1.315 00)	3 CJ	Check Valve	40633-00

# **Square Lug Swivel Nozzle Bodies & Accessories**

### **Single Outlet Square Lug Nozzle Bodies**

Robust and cost effective nozzle bodies for sprayers and used on wet boom liquid fertilizer kits.

Boom Pipe	Outlets	Style	Part#
3/4"	1 Square Lug	Check Valve	40651-00
(0.84" OD)	1 Square Lug	No Check	40140-00
		Check Valve	40661-00
1"	1 Carraga I	Manual On/Off	40661-MS
(1.315" OD)	1 Square Lug	No Module	40661-NM
		No Check	40141-00

# KWIKSTOP™ stops Run-on

KWIKSTOP™passively purges air trapped in the sprayer boom.

Nozzles are fed from the top of the pipe

Less air means Less Nozzle Run-on & Drips

### Dual Outlet Square Lug Nozzle Bodies

Robust and cost effective nozzle bodies for sprayers to switch up to two nozzles by simply rotating the outlet. Safer and easier than handling contaminated nozzles.

Boom Pipe	Outlets	Style	Part#
3/4" (0.84" OD)	2 Square Lug	Check Valve	40652-00
1"		Check Valve	40662-00
(1.315" OD)	2 Square Lug	Manual On/Off	40662-MS
(1.315 OD)		No Module	40662-NM

#### High/Low PSI Check Valves

Replace assembly part # ending '-00' to order 4PSI or 15PSI check valves

[BLUE]

-00 [Standard] 15 PSI -P15' [RED]

### **Triple Outlet Square Lug Nozzle Bodies**

Robust and cost effective nozzle bodies for sprayers to switch up to three nozzles by simply rotating the outlet. Safer and easier than handling contaminated nozzles.

	Boom Pipe	Outlets	Style	Part#
	3/4" (0.84" OD)	3 Square Lug	Check Valve	40653-00
	1"		Check Valve	40663-00
	(1.315" OD)	2 Causes Luc	Manual On/Off	40663-MS
L	(1.313 OD)		No Module	40663-NM

20455-04 O-ring, Pressure Pad, Replacement (pairs with 40155-07) Diaphragm Rubber Seal, EPDM (use w/ #20455-04)

Diaphragm Rubber Seal, VITON® (use w/ #20455-04) 40155-12

3/8" Nozzle body inlet o-ring

20455-07 40193-02

## PRODUCT UPGRADE: Diaphragms

A molded, single-piece diaphragm is replacing the two-piece diaphragm rubber + pressure pad o-ring.

### CJ Nozzle Body Repair Kits\* (up to 6 bodies)

BUNA-N Kit incl 6x Pressure Pad O-rings #20455-04 24x Inner-body O-rings #40155-09 #40155-13 6x Diaphragms #40155-07 #40155-12 le either a pair of #20455-04 & #40155-07, or #40155-23. Both serve the same function.

Requires pressure pad o-ring to be removed

# Square Lug Nozzle Body Accessories - Only for Square Lug Nozzle Body Outlets (Teejet, Hypro, etc)

Caps Square Lug

nozzle outlets

40159-05 For 3/8" wide flanged spray tips

#### **Threaded Cap**

40164-00 45° 1/4" NPT-F thread

### **Flanged Strainers**

40150-00 40151-00 Stainless Steel Strainers for Square Lug Outlets

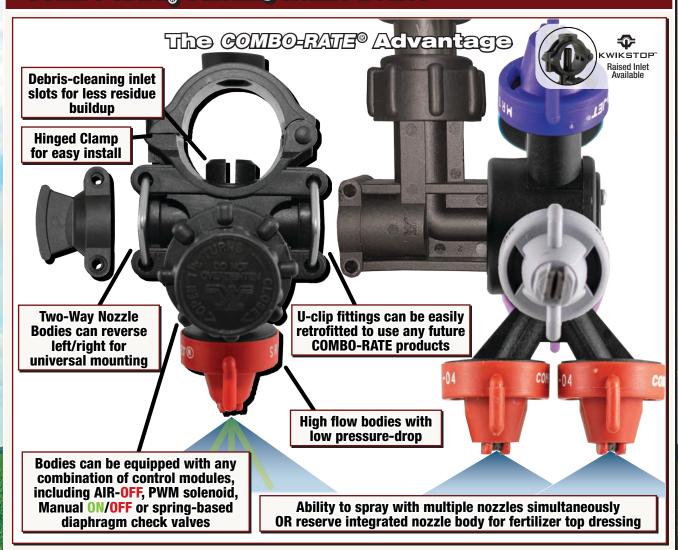

#### **Cap Gaskets**

Sq. Lug Cap Gasket

Gaskets are required to seal all Square Lug Caps

40160-00 [FKM] 40160-V0 [viton]

# **COMBO-RATE** Stacking Nozzle Bodies

#### COMBO-RATE® Side-fed Saddles

Robust side-fed saddles mount with a inlet hole on the side of a sprayer boom, with a female combo-clip port for CR bodies

Boom Size	Inlet Size	Part#
3/4" Pipe (1.05" OD)	3/8" inlet	41203-00
1" Pipe	3/8" inlet	41200-00
(1.315" OD)	9/16" inlet	41201-00
2" Pipe (2.375" OD)	9/16" inlet	41206-00

### **COMBO-RATE®** II Top or Bottom-fed Saddles

Combo-Rate II saddles can be fed with an bottom inlet or flipped and fed from a hole in the top of a boom pipe to passively purge air trapped in a sprayer boom.

41475-00 ONE-WAY 1" Boom Pipe

Combo-Rate female u-clip ports on two sides can be used to attach any Combo-Rate parts

#### **One-Way Stacking Saddles Two-Way Stacking Saddles**

oom Size	Inlet Size	Part#	Boom Size	Inlet Size
1/2" Pipe 0.84" OD)	3/8" inlet	41471-00	1/2" Pipe (0.84" OD)	3/8" inlet

1" Pipe .315" OD)	9/16" inlet	41477-00	(1.315" OD)	9/16" inlet
.315 (UU)	21/32" inlet	41479-00		

# **COMBO-RATE**<sub>®</sub> II Integrated Nozzle Bodies

### One-Way Stacking Integrated COMBO-RATE ® II Nozzle Bodies

One-way stacking COMBO-RATE nozzle bodies stack to the left with one open u-clip port. Typically using a manual on/off module, these bodies can be used to spray separately than turrets/bodies or simultaneously from multiple nozzles. Multiple nozzle spraying can be an effective way to improve coverage in high volume applications to make a more meaningful mix of droplets.

#### **HOW THEY WORK:** Manual ON/ **FF** Check Valves Since Combo-Rate nozzle bodies stack, a manual way to turn off low to certain outlets is required.

When the knob is CLOSED, it urns off flow to that nozzle outlet ONLY. It does not effect other stacked nozzle bodies.

Operating Pressure	10*-125PSI
3/8" Inlet Single Outlet Flow Rate	2.1 us gpm @ 5PSI pressure drop 3.1 us gpm @ 10PSI pressure drop
9/16" Inlet Single Outlet Flow Rate	2.2 us gpm @ 5PSI pressure drop 3.5 us gpm @ 10PSI pressure drop
21/32" Inlet High Flow Single Outlet Flow Rate	3.0 us gpm @ 5PSI pressure drop 4.0 us gpm @ 10PSI pressure drop
O-ring Seals	FKM (viton avail.)
Materials	SS (screws) Glass-Reinforced Polypropylene (body)

### Two-Way Stacking Integrated COMBO-RATE ® II Nozzle Bodies

Two-way stacking COMBO-RATE nozzle bodies stack to both directions, with two open u-clip ports. Typically using a manual on/off module, these bodies can be used to spray separately than turrets/bodies or simultaneously from multiple nozzles. Multiple nozzles spraying can be an effective way to improve coverage in high volume applications to make a more meaningful mix of droplets.

### PWM solenoid or other control module to function

#### **HOW THEY WORK:** Manual ON/OFF Valves

Since Combo-Rate nozzle bodies stack a manual way to turn off flow to certain outlets is required.

When the knob is standard 10 PSI check valve

When the knob is CLOSED, it turns off w to that nozzle outlet ONLY. It does not effect other stacked nozzle bodies.

#### Module Installation & Re-installation

During installation, ensure knob is in OPEN orientation. Otherwise the binding nut cannot seal the nozzle body Ensure the orientation tabs (green) are seated properly.

#### COMBO-RATE Side Turrets - Reversible

Side turrets stack onto any COMBO-RATE nozzle body, mounting on the common u-clip port. Turrets are available in a variety of outlet and module styles, which are mounted onto the side of the turret with a reversible module stem.

	Description & Part #				
Number of Outlets	Dia. Check Valve	Manual ON/OFF	Air-Off Operated	PWM (w/o nut)*	
3 CJ Outlet	41603-00	41613-00	41643-00	41633-00	
4 CJ Outlet	41604-00	41614-00	41644-00	41634-00	
5 CJ Outlet	41605-00	41615-00	41645-00	41635-00

3 CJ Outlet + 2 SQ Lug Outlet	41805-32	41815-32	41845-32	41835-32	
Double-Down + 4 CJ Outlet	41806-00	41816-00	41846-00	41836-00	

Module points upwards to keep large solenoids (e.g. Hawkeye II) out of the way of other boom parts.

Open module thread must have PWM solenoid or other control module to function

41836-00 1 Double-Down **Top Turret** w/ solenoid & nozzles (solenoid sold sep.)

# **Increasing Coverage with Crop-Adapted Spraying**

Different crops require different kinds of spray coverage for best efficacy, so changing how spray is deposited can often provide beneficial results in both coverage and application efficacy. It starts with adapting how the crop is being targeted, ensuring maximizing spray deposition on the target area, and minimizing spray on lessideal or wasted areas.

For example, using two spray tips **straight down** can provide better penetration through thick canopies, allowing for better interior canopy coverage; while two angled spray patterns **forward & backward** can lend to spray coverage at the top canopy foliage or on both front/back of a cereal head.

Why use two nozzles straight down, and not a multi-angle spray tip?

Further distance to target can mean less canopy penetration with angled

COMBO-RATE Double-Down Spraying

TIP HEIGHT

Dual 60° Angle Spray Tip

Spraying

Increased distance to target due to forward/backward angles dramatically reduces entry speed and penetration into a canopy

**CANOPY HEIGHT** 

for Teejet Bodies

**COMBO-RATE** gives you better penetration and coverage for a more consistent application into thick canopy crops.

Examples of *Tough to Penetrate* Crop Canopies

for Wilger Bodies

Spray Velocity Slows Closer to Crop Canopy

# **Picking Nozzles for Double-Down Spraying?**

Applicators often already have nozzles to be used in pairs for double down spraying.

E.g. 5 + 10 gal/acre nozzles could be used for 15 gal/acre. Visit the dual tip spraying guide in the catalog for more info.

# What about spraying vertical targets that don't have a dense canopy?

Angled spray for vertical growing targets (e.g. cereal heads) can provide superior coverage Spraying a vertical target is different than spraying into a canopy. Spraying forward/backward with a nozzles produces spray that can travel horizontal, making it more effective to cover vertical targets at suitable boom heights.

Vertical Target Spraying e.g. Applying Fungicide on Wheat

**Compact Nozzle Bodies** Compact Bodies have many uses, as inline check valves on planting equipment, estate sprayers, dry boom nozzle bodies, or other situations that would require a compact check valve with a Combo-Jet cap outlet.

When in 'ON' position, acts as a 10PSI drip check

Ensure to visit the NOZZLES section of the catalog for the full listing of Combo-Jet Caps

# Wilger 1/2" & 1" Stainless Steel Tube - For QN100 & QF100 Fittings

Wilger Stainless Steel Tubing is engineered for high performing modern sprayers. The high flow sprayer boom tube shares outside dimensions of commonly used sch40 pipe, but the light weight design minimizes weight in the field. Custom tube lengths, spacing and inlet holes are available by order.

### Larger Inside Diameter Inside diameter is larger to

accommodate higher flow rates

### **Rolled End for Cost-Effective Manufacturing** Tube ends are rolled instead of threaded to

minimize downtime, and thread leaking/failure

### For Recirculating Booms Compatible boom fittings & tubing for building recirculating booms

Butterna

### 1" Stainless Steel Tubing Shares 1" sch40 pipe

outside diameter (1.315" OD.) with larger 1.25" inside diameter

### Lighter 1" Boom = Less Fuel weighs 66% of aluminum weighs 23% of sch40 pipe

Lighter than hose

# 1/2" Stainless Steel Tubing

Shares 1/2" sch40 pipe outside diameter (0.84" OD.) with larger 0.788" inside diameter

# **Lighter 1/2" Boom = Less Fuel**

weighs 80% of aluminum weighs 28% of sch40 pipe Lighter than hose

# **Sprayer Tube Shipping Consideration - Length**

Depending on firm requirement for sprayer tube length, shipping costs are less expensive for tubes that are less than 11' (132") in length.

# **Pre-punched Outlet Spacing**

Sprayer tubes are commonly pre-punched to 20" nozzle spacing, but also available in pre-punched to 10", 15", 30" or custom spacing as required.

# **Picking the Correct Style of Tube End & Length**

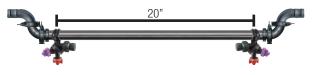

With many different sprayer boom designs, it is important to identify key differences that will determine what length and configuration of boom tube that is required.

Simplify the process by starting from the narrowest tube possible, with additional length included onto the ends as required for configuration or fittings.

The below examples are styles of 'ends' of tubes that are commonly needed. Outlet spacing for the examples is 20", but the same concept applies for any outlet spacing.

# **Standard Tube Ends (2")**

Tubes that have 2" of tube after the last nozzle body are commonly used with QN100 or QF100 plumbing parts.

# **COMBO-RATE Boom End Flush Valve Ends (18")**

The CR BEFV replaces the last nozzle body, and from the end of tube. requires 2" to the nozzle body center, so an 18" end length is required.

Remember the number of outlet holes on the tube would be 1 less for each Combo-Rate boom end flush valve used.

# Center-fed Section Ends (8" or 8.25")

Tubes that are center-fed with Tees require a pair of longer tube sides to maintain proper 20" spacing with a 4" (QN100) or 3.5" (QF100) wide tee.

# 10" Ends for Tube to Tube SST

For situations that require two smaller tubes to be joined tube to tube. the 10" ends maintain 20" spacing between the last nozzle bodies

# **NEW Quick-Flange (QF100) Fittings**

A series of flanged adapters that convert either a rolled-end tube (like SST) or other 1.315" OD tube/pipe to a common 1" flange and tool-free clamp system

# **Quick Nut (QN100 & QN50) Fittings**

A series of quick couplers that use the rolled end to connect to a variety of sweep sprayer fittings to maximize flow capacity and boom hygiene.

# **Quick-Flange Fittings & Fluid Supply System**

# The Quickflenge Adventege

Perfect Recirc. Booms

Robust & Positive Seals

Stronger Compact Fittings

No Threads or Sealant Required

Remove Deadspots for Boom Hygiene

# Retrofitting & Flange Compatibility

Fittings available for complementing any sort of sprayer boom & more.

# CAN BE OUTFITTED FOR:

1" sch40 Pipe (1.315" 0D)

Any 1" Flanged Fittings

Wilger Stainless Tubing

Case Thin Wall Stainless

# **Compact & Robust Sweep Fittings**

Sweep fittings reduce turbulence & pressure loss, producing a sprayer that is capable of higher flow rates with less

# Building a SST Sprayer Boom for Quick-Flange (QF100)

When planning to build a sprayer boom with Wilger's Stainless Steel Tube, follow these steps to break down the process and engineer the best performing sprayer boom possible.

**STEP** Determine tube lengths & spacing required for each section. Simply count the number of outlets on each required boom tube between each fold, accounting for separated sections (if required).

STEP 2 Split up nozzle sections based on boom type, or to minimize boom tube length (e.g. 11 nozzles max).

**For Recirculating (R) Sprayer Booms:** Anticipate keeping sections made with as few boom tubes as possible, as plumbing fittings will only be on the either end of the tube (aside from any tube-to-tube joints on the same section)

**For Standard (S) Sprayer Booms:** Anticipate splitting sections in half, allowing for a center-fed sweep tee, providing optimal pressure to each nozzle in the section.

Determine whether any boom end nozzle bodies (like Combo-Rate Boom End Flush Valve nozzle body) are being used, as they may require different lengths (as they encompass the last outlet on a sprayer boom)

Determine the tube end spacing depending on the fittings used.

CR BEFV requires 18" tube end. Tube Joint requires 10" tube end. Regular fittings requires 2" end.

For example, a	or example, a 5-section recirculation sprayer, with 72 outlets (on 20" spacing) using Combo-Rate End Flush Valve Bodies						
	SECTION 1	1	SECTION 2	SECTION 3	1	SECTION 4	SECTION 5

# **Quick-Flange Fittings & Tubing for Sprayers**

# **NEW Product Release: Quick Flange Boom Fittings & Accessories**

A new product line of engineered sprayer boom fittings to outfit the next generation of sprayers is now here! With emphasis on cutting out contamination, integrating recirculation functions, and generally improving the ability to build a better boom. Wilger is committed to developing and producing high quality liquid application components that are used in setting best practices in an ever-changing environment.

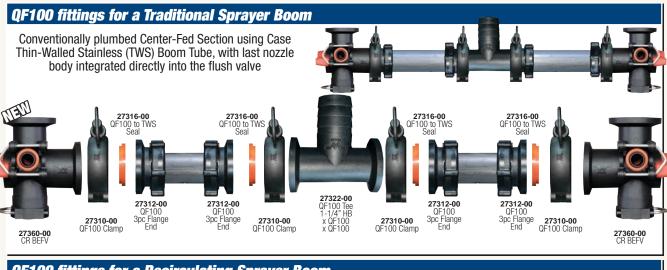

# Adapting Quick-Flange Fittings to 1" PIPE, 1" QN SST, or Case TWS Booms

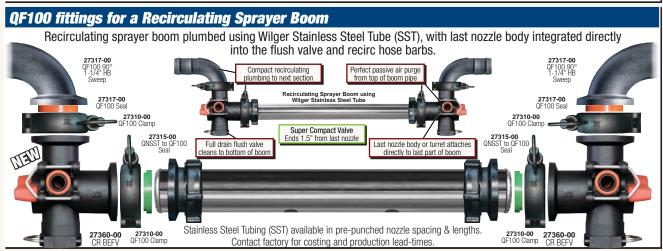

QF100 Fittings can be seamlessly retrofitted or adapted to any 1" Pipe, QN SST, or TWS Booms to a 1" Flange Fitting.

# Quick-Flange Fittings & Fluid Supply System

# **Quick-Flange Clamps**

Compact & robust clamps for easy installation & adjustment with hinging bolt. Compatible with common 1" flange fittings.

	1/2"	20537-00
NPT-M Thread 1/4"		20530-00

# **ORS Outlet Adapters & Plugs**

O-ring seal outlets with female threads, plugs and more. Compatible with all ORS metering orifices for metering flow.

Type	Orientation	Part#
1/4" NPT-F	Straight	20519-00
1/4 INF1-F	90°	20518-00
ORS x Sq Lug	Straight	20549-00
ORS Plug	Straight	20529-00

OBS x Square Lug adapter adapts to any square lug nozzle cap (e.g. Teejet/Hypro/

# O-ring Seal (ORS) Manifolds & Tees

### **PRO TIP:** Lubricate ORS fittings before assembly

When assembling any flow indicator or 0-ring seal (ORS) parts, using a touch of lubricant (e.g. liquid silicone) on the O-ring makes assembly easy.

## **ORS Inline Strainer**

Inline strainer with removable 50-mesh cartridge can be reversed for universal flow direction.

20576-00 Strainer Assembly [50 Mesh]

Description	Part#
ORS Strainer Assembly [50 Mesh]	20576-00
Replacement Strainer [50 Mesh]	20576-02
2" ORS Spacer Assy [no strainer]	20576-05

# **ORS Tees & Other Fittings**

A variety of fittings for splitting manifolds, ORS-F outlets or other auxiliary functions.

20527-00

1/4" NPT-F Port can be drilled out for pressure gauge installation

2052	23-00

# **O-ring Seal (ORS) Metering Orifices**

Precision metering orifices for metering liquid fertilizer or chemical made of chemically resistant and rustproof material. The easier to handle orifices seal positively into any O-ring seal (ORS-M) fitting port, and cannot be inserted backwards ensuring proper fit and seal.

Available in precision molded color-coded sizes (more consistent) or custom drilled sized orifices (black).

Color-Coded Molded **Orifices** 

**Custom Drilled** Orifices (replace XXX with hole size)

Blank Plug (no holes)

Color-coded size makes identifying orifices easy

Use the FREE Tip Wizard app to select your metering orifice. Simply input rate, speed & spacing, and get the best orifice for the job. Available at www.WILGER.NET

# O-ring Seal (ORS) Metering Orifice Charts

Tip Wizard makes metering orifice selection easy!

ORS metering orifices have a sized hole that determines the flow rate. Flow rate is determined based on the pressure and density of the liquid being applied. To determine a required flow rate, you must first know the required application rate, speed and spacing.

**Available on** App Store

# **Calculating Required Flow Rate for Metering Orifice Selection**

To determine the flow rate (or application rate), use the following equations & density conversion chart:

W = Outlet Spacing (INCH)

conv = Conversion Factor based on (per outlet)

GPM = GPA x mph x W x conv

[PA x mph x W x conv per outlet]

specific gravity/weight of liquid

 $GPA = 5940 \times GPM (per outlet)$ 

mph x W

EASY-TO-USE ORS orifice and ball selector calculator available @ www, WLGER.NET

Solution Weight (lbs/ us gallon)	Specific Gravity	Conversion Factor (conv)
8.34 (Water)	1.00	1.00
10.65 (28-0-0)	1.28	1.13
11.65 (10-34-0)	1.39	1.18

FRONT: OW FLOW

STANDARD FLOW COLUMNS

# (1) Required Storage for Flow Indicator Columns

Wilger Flow Indicator columns are made of a specialty UV-stabilized compound (TPX™) that maximizes chemical resistance, providing compatibility for a huge range of chemical applications As with any plastic, UV exposure degrades the flow indicator columns.

To maximize flow indicator column clarity & longevity, completely cover

the flow indicator columns from UV exposure (sun/etc.) when not in use.

Red Celcon Ball Lower Rate/Speed Red Glass Ball Higher Rate/Speed

below can cover changes in application rates or speeds.

# Wilger Visual Ball Flow Indicators - Balls & Setup Guide

### Flow Indicator Balls & Selection Chart

Weighted balls are used inside flow indicator columns and within the operational flow range, will suspend within the column, showing relative flow rate to other flow columns.

7/16" Stainless Steel (302) Ball	20460-10	n/a	n/a	1.00-2.70 us gpm	

# Applying Dark Fertilizers & Variable Rate Applications

With more liquid fertilizers and products being darker (e.g humic acid content), consider a few tips that may help visual representation of flow

### For Red Liquids

(e.g. Paralign Fertilizer)
White backboard for improved visibility.
White celcon ball for red

### **For Dark Liquids**

(e.g. Humic Acid) Pink celcon ball for black & dark liquids.

### For Variable Rate

Considering using two balls to better illustrate changes in flow rate. Select a lighter ball for the lower rate, and heavier for the higher rate

\*Density/Viscosity of liquid used can effect operating range. In very dense liquids, balls may float.

# **Ball Selection Example**

Liquid Weight: 10.67 lbs/ US Gallon

Speed: 5 mph Outlet Spacing: 30 inch

### Ultra-Low Flow

Rate: 4.5 US Gal/Acre Flow Rate: 0.129 us gpm Ball: Red Glass

### Low Flow

Rate: 10 US Gal/Acre Flow Rate: 0.286 us gpm Ball: 1/2" Stainless

### Standard Flow

Rate: 20 US Gal/Acre Flow Rate: 0.571 us gpm Ball: Red Glass

# **Guide to Building a Liquid Kit with Flow Indicator Manifolds**

# **STEP 1 Select: Manifold-Feed** or **Isolated-Feed** Style Flow Columns

Choose the style of flow column that suits the application equipment being monitored

# STEP 2 Determine Flow Indicator Column Size (e.g. Ultra Low Flow, Low Flow, Standard Flow)

Depending on the flow rates required, select the flow column that would provide the best fit to the required flow rate or range. Usually this is accomplished by finding a column size that has your flow rate towards the middle of the range or higher.

### STEP 🕙 Select: Flow Indicator Balls to use

Consult the ball flow chart to determine which balls should be used. It can be optional to use two balls to illustrate a flow rate range.

# **STEP 4 ORS Check Valves** [Optional]

A variety of check valves are available. Typically an ORS to ORS check valve would be used unless adapting a manifold to combo-jet caps. One check valve is required per flow indicator.

# **STEP ORS** Inlet Feeds, Tees, & Strainers

Determine how many manifolds are required, whether the manifolds are fed with a Tee fitting, as well as whether an inline strainer will be added to each manifold. Determine the size & type of inlet fitting. One set of inlet/tee/strainer is required per manifold.

# **STEP ORS Metering Orifices** [Optional]

Any metering manifold should have a means to meter the flow for each row to keep rows consistent. Without a metering orifice, the flow rates between rows can vary greatly. One metering orifice would be required per flow indicator column.

### STEP 🕖 ORS Outlet

Select the size, and style of outlet to be used for each row of product. Consider applying a small bit of lubricant (e.g. liquid silicone) on the o-ring to air in easy installation of outlets and other ORS fittings. The outlet would hold the ORS metering orifice, if used.

### STEP <sup>3</sup> ORS End Caps & Adapters

A variety of end caps are available as adapters which can be used for many situations, but typical an ORS end cap would be used. Two end caps are required per manifold if a Tee fitting is used.

### Do you plant at night or in low visibility? Take a look at Wilger's Electronic Flow Monitoring (EFM) System

Wilger's row-by-row flowmeter uses the same ORS parts and manifolds, and can be simply added inline for existing manifolds.

Simply add a flowmeter for each row and connect the electronic harness to see actual flow rate on each row (up to 200 rows), for flow rates of 0.04-1.53 us gpm flow.

Superior Chemical Resistance

Serviceable Flowmeter for Ag.

High Accuracy Flowmeter

Patented Flowmeter Canadian Patent No. 2987646 AUS Patent No. 2017376849 U.S. Patent No.10.845,228

# Crystal Clear Flowmeters Enables easy system

Enables easy system troubleshooting & verification

### **Monitors Huge Flow Range** Accurately measures flow rates of 0.04-1.53 us gpm per row

How It Works
High Resolution Hall-Effect
Sensor & Ceramic Magnet
combo provide accurate pulse
frequency to determine flow

# **Trouble-free Connectors**Keyed Deutsch connectors ensure weather-sealed wiring

# Monitor up to 3 Products Simultaneously monitor up to 3 products within the same system

# Monitor Any Sized Equip. Monitor up to 200 rows or outlets on any equipment

# **Custom High/Low Alarms**Customize threshold alarms

# **Custom Screen Layouts**Customize screen layouts between products, sections, or any other way

### Chemical Resistance Clear TPX material provides visual & non-stick surface

# Easy Retrofit

### Easily retrofits to any existing ORS or Flow Indicator Fittings

### Simple Harnessing Composed of an ECU with dairy-chained product nodes & sensors

### WIFI communication ECU generates WIFI straight into the cab

# Build your Electronic Flow Monitoring System with help from www.wilger.net

Use the new EFM system parts kit builder available at www.wilger.net. Simply input your implement size and layout and receive a parts list & quote. Simple as that.

# **Compact ECU for Demo Units & Planters up 16 Rows**

Wilger is introducing a compact flow monitoring system ECU, that acts as a standard ECU with built-in 16 channel node.

For an even easier setup for in-store demonstration or as fully functional 16-row planter EFM systems.

Available now in limited quantities. **Book yours today!** 

# Wilger Electronic Flow Monitoring System Components

### **Electronic Flowmeters & Jets**

A clear flowmeter that connects to any ORS outlets, with an accurate flow range of 0.04 - 1.53 us gpm, using patented flow stabilizing jets.

20580-06 Body Assembly EFM BODY ASSY

Product	Description	Part#
Electronic	Flowmeter Kit	20580-0
Flowmeter Body	Body Assembly (no jets)	20580-06
[0.04-1.53 us gpm]	Body Only	20580-01
Davids a service to take	Green (up to 0.12 us GPM)	20581-01
Replacement Jets (with 50 mesh snap-in strainer)	Red (0.1 - 0.31 us gpm)	20581-03
	Blue (0.18 to 0.98 us GPM)	20581-05
Shap-in Strainer)	Black (0.6 to 1.53 us gpm)	20581-07

### Component Checklist for Wilger's Electronic Flow Monitoring System

- As equipment & implements vary greatly, this is a simplified approach assuming the implement is fairly standard and evenly spread, with the manifold centrally located. In many cases, it is more cost effective to move manifolds, from the wings of the implement, to the center
- 1 Order 1 ECU assembly per system. (#20603-00)
- Add the # of outlets (including multiples for monitoring multiple products). Divide the total # of outlets by 16.

  Round up to nearest whole number. Order that many 16CH Node kits. (#20621-00)

  4CH Node kits can also be effective for 'extra' outlets in systems as needed, but 16CH node kits are typically more cost effective.
- 3 Order 1 EFM assembly kit (#20580-00) per outlet (incl. multiples for monitoring multiple products)
  Alternatively, order EFM manifold kits (#20631-00 to #20634-00) to fit your requirements for sections.
- Order 1 ORS Outlet (Page 16) & 1 ORS Check Valve (#20551-00) per EFM body.
  Order manifolds & plumbing components (& end caps) suited for the implement size
- [Optional if metering orifice req'd] Order orifice (Page 17) for each outlet, ensure proper metering orifice size for each product/rate. Use Tip Wizard online @ www.wilger.net or the free app, to ensure proper sizing.

For more information, start the conversation on building your EFM system with your Wilger dealer, and for more pictures/information, visit our website at: www.WILGER.NET

### EFM System Checklist

- 1x ECU KIT per system
- 1x 16CH Node Kit per 16 outlets 1x Flowmeter (EFM) per outlet
- 1x ORS Manifold Outlet per outlet
- 1x ORS Check Valve per outlet
- 1x Inlet Feed or Tee per manifold 1x End Cap per manifold (2x if Tee'd)
- Extension harnesses if req'd 1x Android 8.0 Tablet or newer

For a simpler start to customizing an EFM system, use the new EFM system parts kit builder available at www.wilger.net.

Simply input your implement size and layout and receive a parts list &

Simple as that.

# EFM VIDEO TUTORIALS - Setting up EFM App on Android Tablet

Make sure to take advantage of video tutorials on initial setup and planning of EFM system app on your Android Tablet. Videos on YOUTUBE, or accessible from www.WILGER.NET
