

Boom End Flush Valve (BEFV) Handle Change & Retro-Fitting

This bulletin illustrates the new handle for the BEFV, as well as how to retro-fit from an older existing valve handle. The longer handle will allow easier turning and clearer indication whether the valve is opened or closed.

Effected Part#: #25175-V0, #25176-V0, #41402-V0

Hump indicates 'closed' position
For identifying if a valve is still open.

2-3/4" Long Handle
For better leverage and easier turning

Existing Valve Handle

#25175-03

NEW Longer Valve Handle

#25175-13

Is your flush valve tough to turn? *Your seal might be dry.*

With chemicals & ammonia-based rinse & cleaning agents, the o-ring seal within the flush valve core can become dry and stiff to turn. To alleviate this issue, simply lubricate the seal by spraying a lubricant like liquid silicone up the flush valve spout, and turn the valve a few times to lubricate the seal. *Good as new! Ensuring the cover cap (#25175-11) is on when not in use further extends the valve life.*

Retro-Fitting Handle & Replacement (requires #2 Phillips Screwdriver)

It is a simple process to switch an older revision handle with the new one, but special caution must be taken to ensure proper orientation, as well as special care taken to ensure the screw hole is not stripped.

<Ensure your valve is in the CLOSED position when replacing valve handles>

STEP #1: Remove Handle

Ensure to remove screw carefully, without stripping the existing valve core

#2 Phillips
Screw

STEP #2: Replace Handle

The Core & handle have a 'keyed' orientation¹, so there is only one correct way to install the new valve handle.

¹Correct key has flat side [left] & rounded side [right] when valve is closed.

STEP #3: Tighten Screw

Tighten screw snug with new handle. Ensure not to strip out screw hole.
